EDUCATION

University of California, Riverside - Full Stack Web Development

February 2021

PROJECTS

Rediscover App - [GitHub Repo](#) | [Live Link](#)

2021

Rediscover is a Full Stack React application, developed by a team of five. Created for users to Rediscover the world around them. Rediscover allows users to share images and locations of their adventures. Sorted by categories, which include murals, historical locations, haunted houses, film locations, nature shots, and a miscellaneous category. An example user would be able to publish an image of their mural with a location tag for other users to visit the mural location.

Tools and Languages used: MongoDB, Express.js, React, Nodemon, Bootstrap, Google Login, Material UI..

The Long Cut - [GitHub Repo](#) | [Live Link](#)

2020

Led a team of four, in developing a full web application that provides Long routes for car cruising. Application has been made, to provide maps, via Google Maps API. Besides Long routes through scenic environments, it also provides a range of lesser known California hiking trails. Maps API, provides an array of useful information, for your driving or hiking needs.

Tools and Languages used: HTML-5, CSS, Vanilla JavaScript, GoogleMaps Api, Giphy Api.
